

WHAT IS CLAIMED IS:

Sub
al

1. A communication terminal apparatus capable of receiving information from a communication system network, comprising:

5 receiving means for receiving information from the network;

a display configured to display information;

illumination means for illuminating the display;

10 a detector configured to detect completion of information reception by the receiving means;

display control means for causing the display to display information received by the receiving means, when the detector has detected the completion of the information reception; and

15 a illumination controller configured to cause the illumination means to illuminate the display, when the detector has detected the completion of the information reception.

20 2. A communication terminal apparatus capable of receiving information from a communication system network, comprising:

receiving means for receiving information from the network;

a display configured to display information;

25 illumination means for illuminating the display;

illumination detecting means for detecting an intensity of illumination;

09964466-092801

display control means for causing the display to
display information received by the receiving means,
5 when the detector has detected the completion of the
information reception; and

3. A communication terminal apparatus capable of receiving information from a communication system network, comprising:

20 a display configured to display information;
 illumination means for illuminating the display;
 timer means for measuring time;

display control means for causing the display to
display information received by the receiving means,
25 when the detector has detected the completion of the
information reception; and

a illumination controller configured to cause the

illumination means to illuminate the display, when the detector has detected the completion of the information reception, and a time point detected by the timer means falls within a predetermined time period.

5 4. The communication terminal apparatus according to any one of claims 1 - 3, further comprising:

 sound generating means for generating a sound; and

 sound generation control means for causing the
10 sound generating means to generate the sound to thereby inform a user of the completion of the information reception, when the detector has detected the completion of the information reception.

 5. A communication terminal apparatus capable of receiving information from a communication system
15 network, comprising:

 receiving means for receiving information from the network;

 a display configured to display information;

 illumination means for illuminating the display;

20 display control means for causing the display to display information received by the receiving means; and

 a illumination controller configured to cause the illumination means to illuminate the display, when the
25 display control means has started display of information on the display.

 6. A communication terminal apparatus capable of

0964466-092801

25 a display configured to display information;
 illumination means for illuminating the display;
 timer means for measuring time;
 display control means for causing the display to

display information received by the receiving means;
and

a illumination controller configured to cause the
illumination means to illuminate the display, when the
display control means has started display of
information on the display, and a time point detected
by the timer means falls within a predetermined time
period.

8. The communication terminal apparatus according
to any one of claims 5 - 7, further comprising:

sound generating means for generating a sound; and

sound generation control means for causing the
sound generating means to generate the sound to thereby
inform a user of the completion of the information
reception, when the display control means has started
display of information on the display.
